FIRMAN Pollen™

Serving Agriculture Since 1933

ALMOND POLLINATION

Increase your bottom line.

Producing the maximum tonnage of quality almonds is critical every year. Using Firman Pollen Company's compatibility matched, multiple variety mixes consistantly increases nut set and your bottom line.

Fighting the weather.

Springtime weather can make setting almonds difficult. Adding Firman Pollen™ at the hive entrance makes every hour of bee flight as productive as possible.

Poor bloom overlap.

Poor bloom overlap costs valuable production. Almond blossoms are only receptive for 24 to 48 hours. Using Firman Pollen™ at the hive entrance sets nuts when the flowers are ready, eliminating missed production due to poor overlap.

Increase bee efficiency.

Bee colonies continue to face ongoing challenges. Firman Pollen™ increases bee efficiency and bee activity. Firman Pollen™ at the hive entrance makes every bee ready to set almonds as soon as they leave the hive. Because Firman Pollen™ acts as a natural bee stimulant, hives work longer hours. This benefits hive strength and natural pollination.

It pays to use Firman Pollen.™

Supplemental Pollination Increases Hive Strength!

The number of bees in the field force increases dramatically with the number of frames per hive. Firman Pollen works as a natural bee stimulant, boosting the number of frames per hive.

Hive Strength and Field Force

Each frame 3/4ths covered with bees equals 2000 bees.

Frames	Bees/Hive	%Field Bees	FieldForce/Hive
4	8,000	N/A	few to none
6	12,000	25%	3,000
7	14,000	30%	4,200
8	16,000	40%	6,400
10	20,000	45%	9,000
12	24,000	50%	12,000

If you have questions about Supplemental Pollination Increases Hive Strength, contact Bob Bishel at 559.871.0967
